PAGANONI

Nearest the coast, vegetation in the Cottesloe unit consists of low limestone heath. To the east upland vegetation contains banksia, Tuart, Marri, Jarrah and sheoak. The seasonally inundated wetland contains woodland of *Melaleuca preissiana* and *Banksia littoralis* and forest of *Melaleuca raphiophylla*.

The Karrakatta and Herdsman units contain several wetlands with their own character and vegetation.
